

# European Materials Characterisation Council

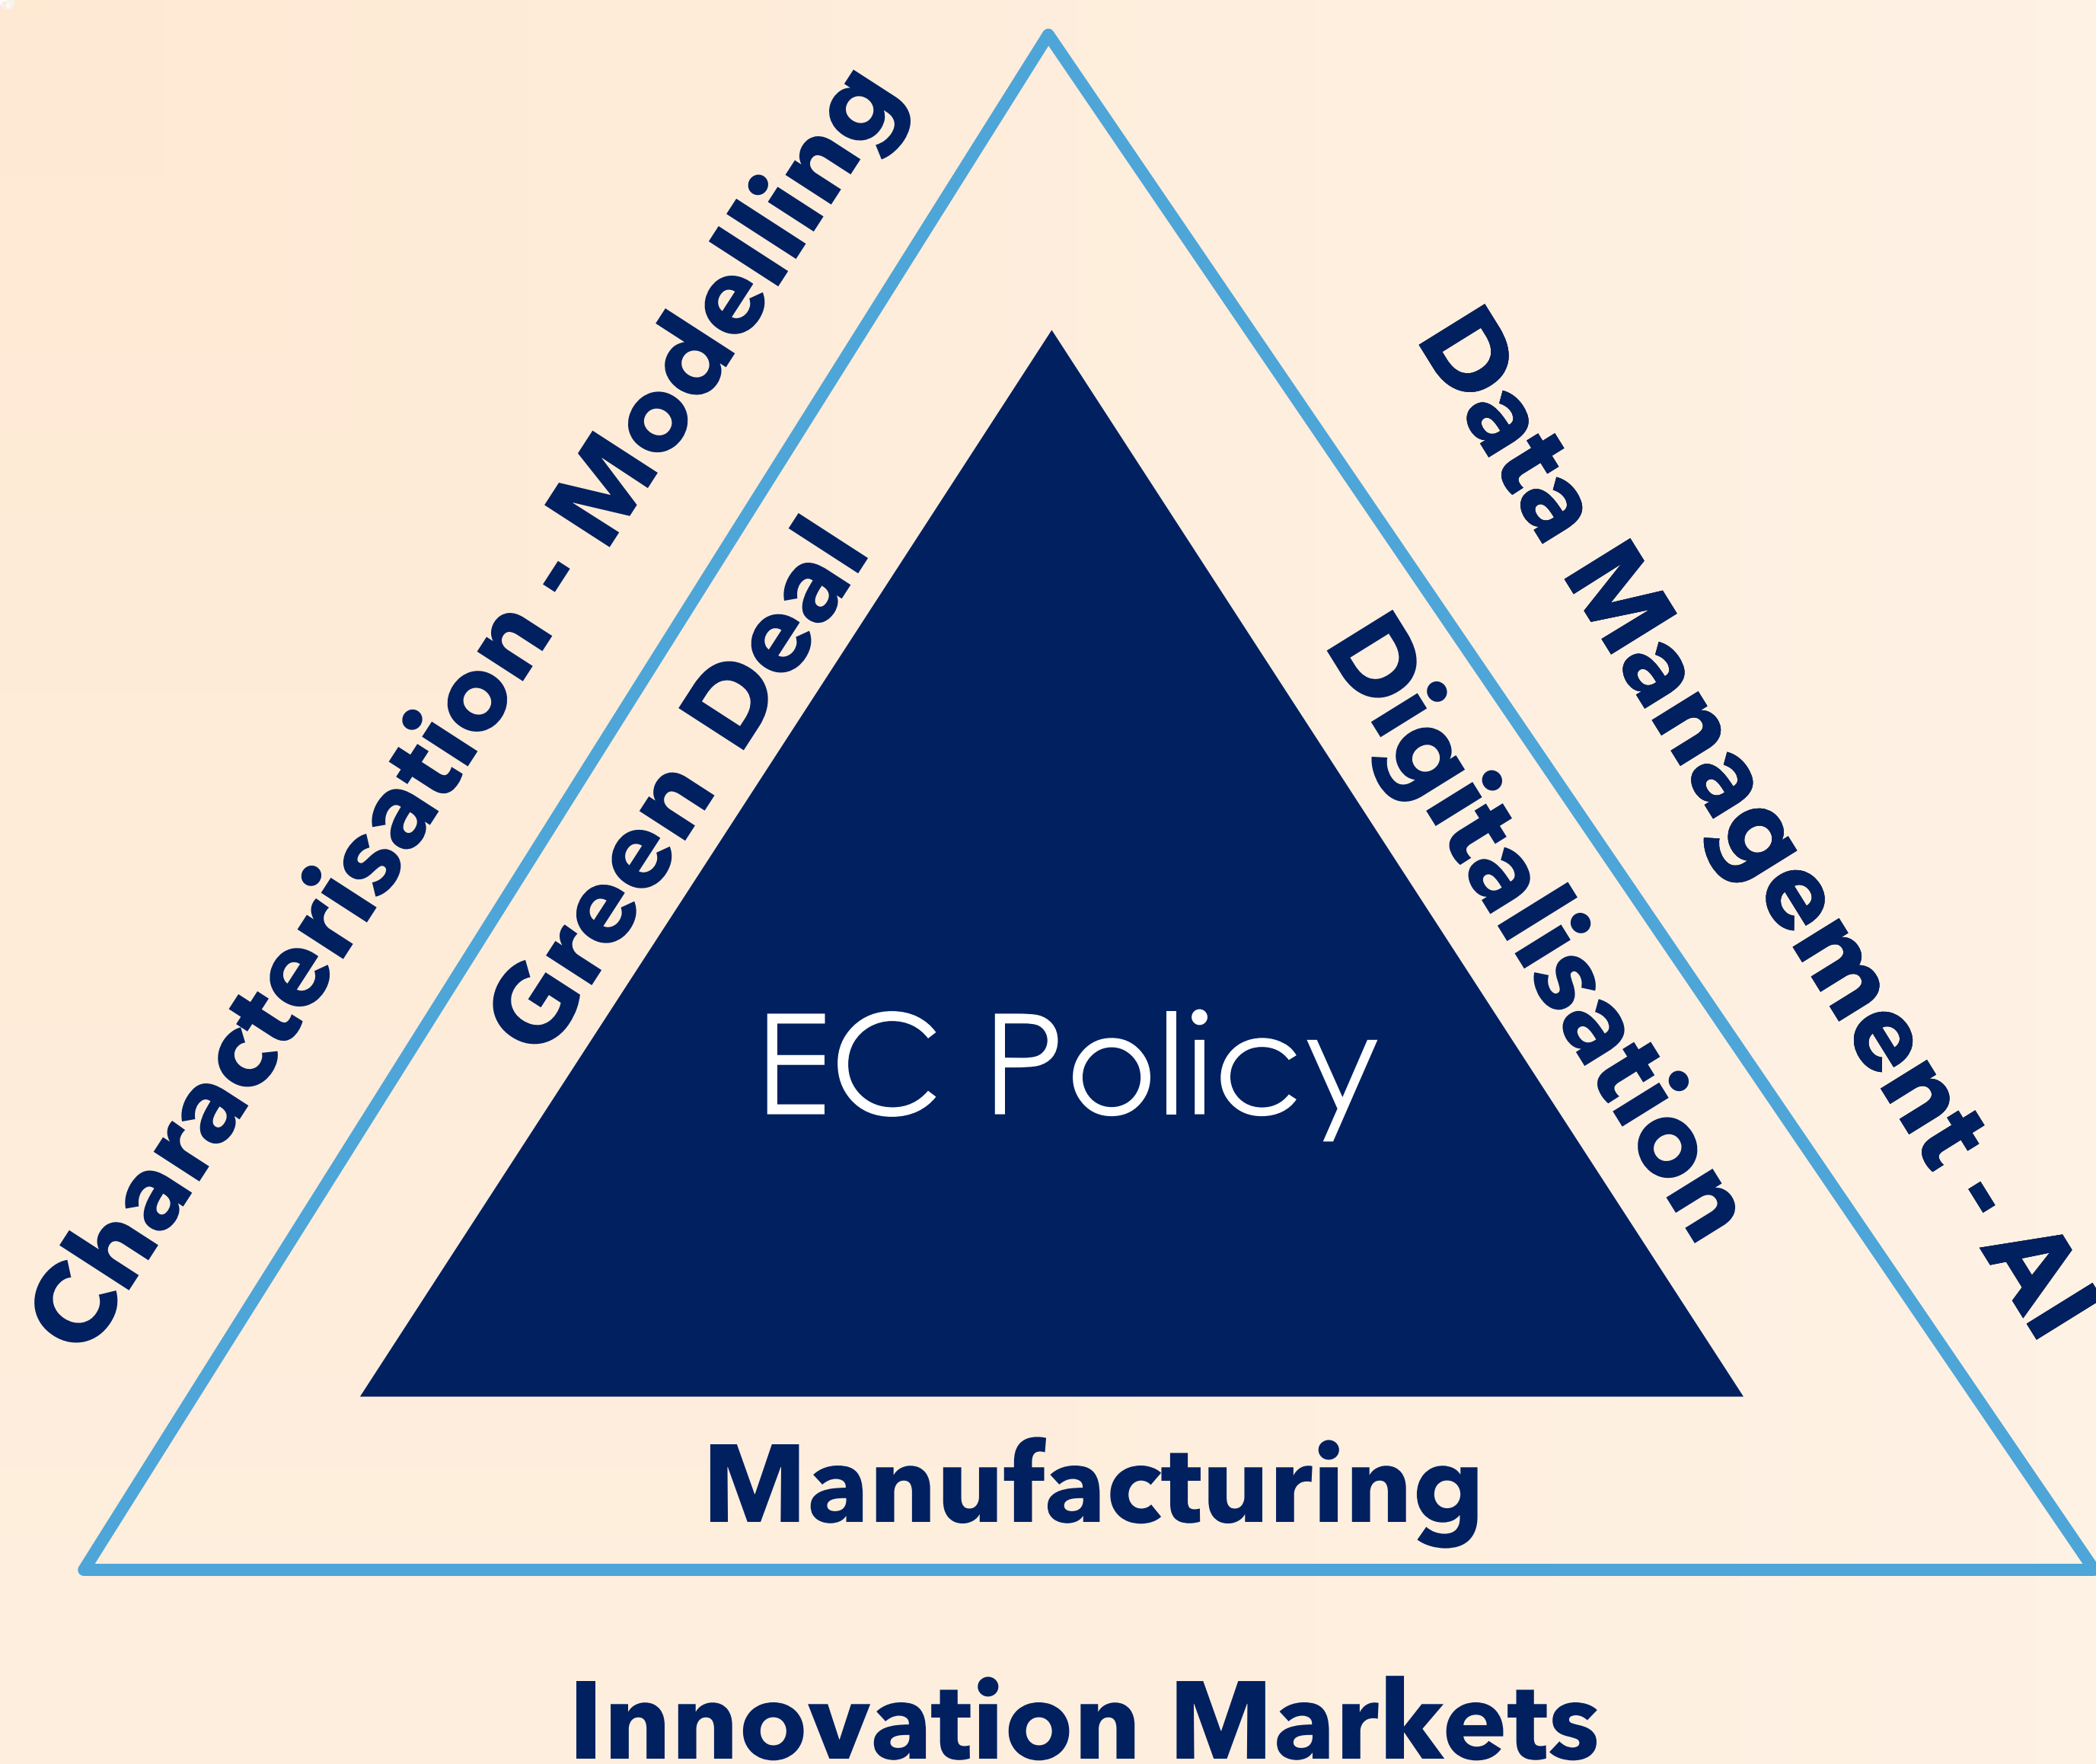

**Founding Members**

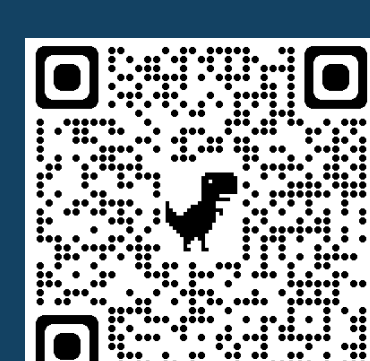

**unravelling the materials' potential,  
upscale and industrial uptake**

EMCC is a European initiative set up at the beginning of 2016, based on and strengthening the existing European Materials Characterisation Cluster (created at the end of 2014). The EMCC aims to support commercialization of materials and regulation through the provision of characterisation tools.

EMCC has established close collaboration with EMMC on the integration of modelling and characterisation and materials digitalisation.
